AI governance, simplified.

Control how AI agents and APIs reach your healthcare data. Guardian enforces your policies and records every request.

AI is multiplying. Your approach to control needs to scale.

CHAI and Joint Commission guidance helps health systems establish responsible AI practices. Putting that guidance into practice means translating that guidance into controls over how AI agents reach healthcare data and services.

Access and control shouldn't be a trade-off.

Guardian gives AI agents and apps the access they need while holding every request to the rules you set.

01

Set your rules

Define which agents and apps can call which services, and what they can do.

02

Enforce them

Guardian verifies every caller and blocks any request outside your rules.

03

Review activity

Use request records to investigate questions and update rules as needs change.

What you get with Guardian

Adopt AI faster, with control

Reduce AI and API risk

Add connections with less effort

Why healthcare organizations choose Guardian

AI access control	Authenticate agents and applications, restrict access to permitted services and operations, and enforce rate limits
Audit-ready oversight	Know who's calling and keep a tamper-resistant audit trail of AI agent, MCP, and API activity.
Built for healthcare	Purpose-built for clinical and administrative use cases, with support for FHIR and SMART on FHIR.
Flexible deployment	Run it as SaaS, on your infrastructure, or hybrid, with the same capabilities in each.

Where Guardian fits

Apps, partners, and AI agents authenticate through Guardian before reaching your systems, so you can see what passes and what's blocked.

01 Sign up
Give every caller its own credentials

02 Establish
Confirm who's calling

03 Codify
Turn written policy into rules

04 Uphold
Apply the rules in the moment

05 Respond
Watch activity and act on it

06 Evidence
Produce a record others can trust

1,900+
healthcare organizations
