

# Accelerate Any-to-Any Health Data Integration

Innovation continues to disrupt and transform healthcare. Advancements in consumer engagement, value-based care, and care coordination models make the need to access and use data more critical than ever.

These advancements create opportunities to enhance workflows inside and surrounding the EHR which accelerates the need for confident and rapid data exchange.

## Seamless and Secure Integration

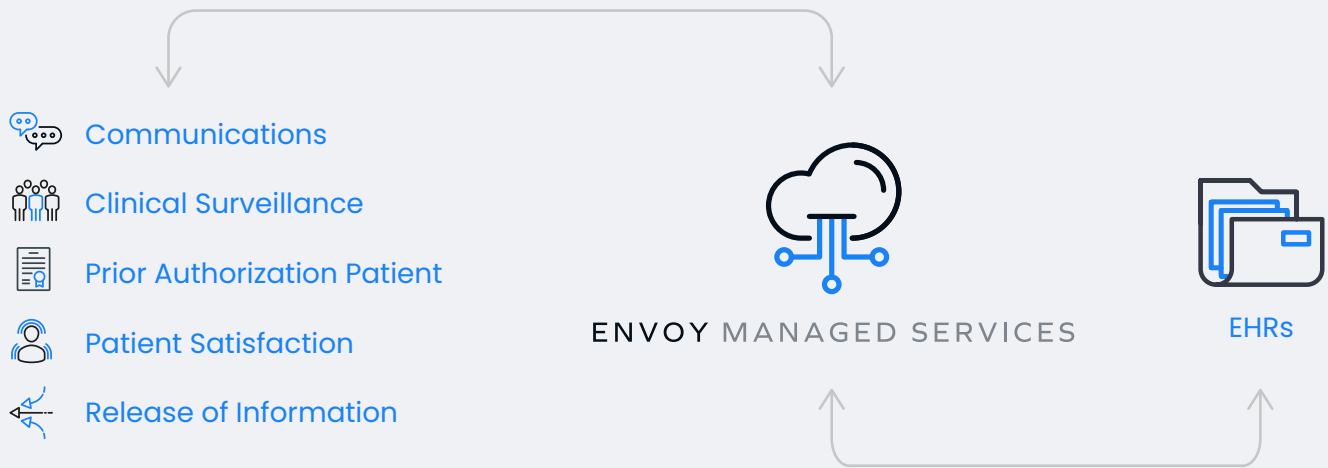

The Rhapsody fully managed service offering, Envoy, makes your most difficult integrations happen fast. Using proven technology and expertise, Envoy enables patient data integration from any source to any destination, in any format. Whether it's for a single pilot or scaling to hundreds of integrations. Instead of investing in specialized integration resources, the deep expertise of Rhapsody solves this, so your team can focus on other key initiatives.

***“Because we chose Envoy Managed Services, we were able to quickly launch this clinical trial and automate an otherwise manually intensive workflow.”***

**Mike Hawn**  
SVP Data Services & Product Solutions  
for BioIntelliSense

## Successful Integrations with EHRs

## EHR integration experts

Rhapsody has extensive experience solving healthcare integration problems built on a deep understanding of EHR workflows along with cutting-edge automation of cloud infrastructure security, devOps processes, and interface engines – all built on a solid foundation of continuous HIPAA compliance.

## What we offer

### Interface Build & Configuration

We transform HL7 messages into JSON or FHIR messages to keep information standard across implementations.

### Project Management

Our dedicated team helps you manage timelines, create project plans, and track deliverables.

### Setup & Maintenance

Envoy engineers build, configure, test, and maintain VPN connections to allow for data transmission.

## Use Cases

Envoy's any-to-any EHR integration approach helps a variety of solutions across the entire spectrum of healthcare, such as:

- Population Health
- Patient Engagement
- Patient Record Outcomes
- Prior Authorization
- Telehealth
- Consumer Engagement
- Clinical Decisions
- Support Communications
- Release of Information
- Supply Chain Optimization
- Claims Processing & Audit Tracking Solutions
