2
Push Option

Notes

1 **Pull Option**: FHIR or proprietary REST APIs.

2 **Pull Option**: Envoy response is shared.

1 **Push Option**: A standards-based option such as HL7 v2, XML CDA, DICOM, X12 or a non-standard option such as SFTP. Most partners prefer to provide Rhapsody with an API to use.

2 **Push Option**: For writing data to the EHR, Rhapsody will expose a REST API to call over HTTPS. *If using HL7 from the Health System to Rhapsody, a secure connection (e.g., VPN) is established.*

Benefits of Envoy

○ Compliant platform

○ Any-to-any health data integration

○ Normalization of data structure into consistent data model

○ Dedicated insistence per customer, with high availability infrastructure

Are you looking to take the stress out of your EHR integration?
