

Your AI Integration Expert

Build, troubleshoot, and maintain integrations with confidence

Rhapsody Axon enables healthcare teams to interpret requirements, guide integration work, and take action across workflows—reducing friction, improving consistency, accelerating time to delivery, and keeping integration work moving.

Integration Expertise Embedded in Rhapsody and Corepoint

Axon keeps work moving with agentic workflows

- Deliver more integrations with limited resources
- Minimize maintenance and troubleshooting
- Reduce back-and-forth and avoid rework

Without a scalable interoperability foundation, innovation slows, data remains fragmented, and operational complexity grows.

Axon can help you...

- Build new integrations
- Optimize your existing integrations
- Interpret integration requirements
- Accelerate provider–vendor integrations
- Troubleshoot and maintain integrations

Why AI-powered integration matters

Integration work slows healthcare down when knowledge is hard to access:

- Teams lose hours interpreting specifications, hunting best practices across FHIR, HL7v2, and APIs
- Knowledge lives with a handful of experienced experts, creating bottlenecks and delays
- Fragmented documentation makes answers hard to find in the moment work is happening

150+ Users

Early access usage across integration teams

Every 2 Weeks

Automatic updates, no upgrades required

50%+ Faster

Product help and engine knowledge—on demand

Rhapsody Axon brings trusted knowledge into directly into the workflow—so teams can move faster, reduce friction, and deliver with confidence across build, troubleshooting, and maintenance.

Real questions. Real answers.

See how real customers are using Axon to improve their workflows today

"Describe the structure of an HL7 v2 SIU message"

"How do I maintain multiple production repositories so they are a copy of each other?"

"How do I create a web services post endpoint?"

"FTP connection is sending error message ABORT: Missing OutboundProtocol metadata set."

"I have an alert threshold that needs 2 send email actions. the first one executes but the second one doesn't. What are some troubleshooting steps I can take?"

Key Differentiators for AI-Powered Integration

Axon's Value

Why It Matters

✓ Deep integration expertise, captured and accessible	Brings trusted knowledge from documentation, best practices, and real-world experience into the workflow—so teams don't have to search for answers
✓ Knowledge that scales across teams	Reduces reliance on individual experts, accelerating onboarding and improving team-wide performance
✓ Grounded in trusted Rhapsody knowledge	Draws on curated product documentation, standards, and real-world guidance to deliver accurate, relevant answers—not generic ones
✓ Guidance within the flow of work	Helps teams understand what to build and how to build it without breaking focus or switching context
✓ Faster troubleshooting	Helps teams diagnose issues and identify next steps quickly, keeping integration work moving
✓ Built for modern and evolving integration standards	Supports FHIR, HL7v2, and APIs with best practices built in—so teams work confidently across legacy and modern workflows
✓ Customer data stays private	Customer data is never used to train models or shared with model providers
✓ Secure by design	Encryption and access controls protect customer data and prevent exposure across customers

Lay the foundation for AI-Powered Integration

Simplify integration with Axon and pave the way for faster delivery, reduced friction, and more confident integration across your organization.
